DEMO DATA — fictional profile. Not a real person; not verified employment or education history.

Kavya Suresh Deshpande

B.Tech in Computer Science and Engineering · Demo Institute of Technology
kavya.deshpande.demo@example.com · +91-9000054321 · Pune, Maharashtra, India

Career Objective

To begin my career as a software engineer, contribute to practical software development projects, and strengthen my skills in backend engineering, AI applications, and system design.

Career Goals

In the next few years I want to become a dependable backend engineer, gain experience designing scalable services and AI-powered features, and eventually mentor new engineers while growing into a technical lead.

Education

Degree	B.Tech in Computer Science and Engineering
University	Demo Institute of Technology
Graduation Year	2029
CGPA	8.6/10

Technical Skills

Programming Languages	Python, C++, JavaScript, SQL
Frontend	React.js, HTML5, CSS3, Tailwind CSS
Backend	Node.js, Express.js, FastAPI
Databases	MongoDB, PostgreSQL, MySQL
AI and Machine Learning	Large Language Models, Retrieval-Augmented Generation (RAG), Semantic Search, Document Processing, Natural Language Processing
Tools	Git, GitHub, Docker, Postman

Work Experience

Software Development Intern — DemoTech Solutions (fictional)
Duration: May 2026 – July 2026
Fictional internship entry for demonstration; not verified employment history.

Responsibilities

- Developed REST API endpoints for an internal project management application.
- Implemented database operations for storing and retrieving project information.
- Assisted with frontend integration and API testing.
- Collaborated with team members to identify and resolve application bugs.

Achievements during the internship

- Implemented automated API tests for selected endpoints.
- Improved the reliability of the demo application's data validation workflow.

Projects

Project: AI-Powered Resume Assistant
Description: Developed a prototype that extracts information from resumes and retrieves relevant details to answer questions about a candidate's qualifications.
Technologies: Python, FastAPI, RAG, vector database.

Cloud Experience

DEMO DATA — fictional profile. Not a real person; not verified employment or education history.

Cloud computing experience: deployed the AI-Powered Resume Assistant to a cloud virtual machine on AWS EC2, packaged the FastAPI service with Docker, and stored its data on a managed MongoDB Atlas cluster. I configured environment variables, security groups and a simple health check for the deployment. (Fictional demo experience.)

Strengths

- Analytical problem-solving.
- Quick learning and adaptability.
- Ability to break complex problems into smaller tasks.
- Team collaboration.
- Willingness to learn new technologies.

Weaknesses

I sometimes spend extra time refining technical solutions because I want them to be reliable. I am improving my ability to prioritize tasks, define time limits, and balance code quality with delivery deadlines.

Selected Responses

Topic	Response
Project contribution	My contribution to the AI-Powered Resume Assistant project: I designed the document ingestion flow, wrote the FastAPI endpoints that accept resume uploads and answer questions about a candidate, and built the retrieval step that selects the most relevant passages. I also wrote the automated tests for the upload and question-answering endpoints and documented how to run the project.
Technical challenge solved	A technical challenge I solved: in the AI-Powered Resume Assistant, answers sometimes quoted unrelated sections because long resumes were split into chunks that were too large. I solved it by splitting text into smaller overlapping chunks, comparing the retrieved passages against a set of sample questions, and tuning the chunk size until the correct section was returned consistently.
Achievements I am most proud of	Achievements I am most proud of: I completed an academic project involving REST APIs and database integration, built several working software prototypes during my first year, and implemented automated API tests during my internship that made the team's releases more reliable.
Why you should hire me	Why you should hire me: I bring a solid foundation in Python and JavaScript, hands-on experience building REST APIs and AI-based document tools, and a habit of testing my work before I share it. I learn new technologies quickly, communicate clearly with teammates, and take ownership of problems until they are resolved. I am ready to start immediately and contribute from the first week.
Why this role	I am applying for the Software Development Engineer role because it combines backend engineering with practical AI applications, which is where my projects and internship have been focused. I want to build reliable software used by real people and keep growing under experienced engineers.
Approach to solving difficult problems	My approach to solving difficult problems: I first reproduce the problem and read the error messages and logs to understand what is actually failing. Then I break it into smaller parts, test each assumption, fix the smallest cause, and add a test so the problem does not return. If I am stuck for too long, I ask a teammate for help and share what I have already tried.

Topic	Response
How I work in a team	How I work in a team: during my internship I worked with two other interns and a mentor, taking part in daily check-ins, code reviews and bug triage. In the AI-Powered Resume Assistant project I coordinated a team of four, divided the work by module, reviewed pull requests before merging, and kept everyone updated with short written progress notes.
Areas I am improving	Areas I am currently trying to improve: I want to improve my system design skills for larger applications, learn more about cloud deployment and monitoring, and become faster at estimating how long tasks will take. I am working on these by reading engineering blogs, building small deployment exercises and asking my mentor for feedback on my plans.
Additional information	Additional information: I am open to relocating, comfortable working in a hybrid setup, available to join immediately, and happy to complete a technical assessment or interview at the company's convenience. I have no other commitments that affect my availability.

All achievements and experience in this document are fictional demo content.

Additional Information

Availability	Immediate
Preferred Role	Software Development Engineer
Preferred Work Mode	Hybrid
Notice Period	Not applicable to the fictional student profile.
